

## Stop Bogus Ballots!

Please share the link to the website listed below with as many people you know who want an honest election and to keep our freedoms. It is best viewed on a desktop computer screen.

Then, download, print and distribute as many copies of the flyers on that webpage ("Step 1") as you can. Pro-election integrity activists and freedom loving public officials are probably the best audience. This is critical information and is very urgent. - Thank you for your help & patriotism.

Excerpts from the fractal quantum computing team...

### **What does America do when it is conquered quietly, gently, no guns, no blood, no violence, just acquiesce?**

We do not know the answer. We think whatever happens next is a nightmare.

We do think the election will be determined by 25,000 to 40,000 votes in 6 swing states.

About 125,000 in Pennsylvania.

We think there will be several times that number of ballots, in hand, in each state, voted, from ineligible addresses that citizens can challenge.

**The next President of the United States may well be chosen by mail-in ballots from Walmarts, gas stations, abandoned buildings, UPS locations, strip malls and churches with no bedrooms.** It's time to challenge bogus ballots, from ridiculous or ineligible addresses BEFORE the votes are counted, not litigate, and lose afterward - again. Common Sense Elections, a group of attorneys, investigators, writers, entrepreneurs, former elected officials, high tech players - built a national platform to publish, on a day-by-day basis, the ineligible and absurd mail-in ballots - many from Leftist NGOs - interfering with the 2024 election. 2024 will be determined by dirty voter rolls tied to Leftist ballot mills - and Republican blindness. **The problem is the industrialization of mail-in ballots, tied to dirty voter rolls - generated by ballot mills - creating the overwhelming force that now determines every national election. Republicans have no technology to find it!**

National voter integrity orgs cannot and do not publish it - because they use obsolete relational technology which is blind to it. Ballots can be challenged because they came from an ineligible address - according to state law. The problem is nobody but quantum speed compute guys like us, and some very dedicated voter integrity teams can see it. Well, it's your turn now. Our team is providing some of the technology, with others providing their technology. Successful attorneys and the best street fighting investigator org in the field is active and engaged. They need your help to add more states - Michigan, Pennsylvania and others. It's not "too late." Every ballot from a BS address, in any swing state can be challenged now. 45 days is a lifetime at quantum speed. Time to get off the couch, quit emailing about what can be done, and donate to some terrific people doing great work for 2024. Every dollar counts - every donation is a donation toward stopping a bogus ballot from a bogus address - BEFORE the election.

It's not "too late!" Actually, this is when most of the dirty ballots are infused into our election system. This is when the CSE team can use their fractal quantum computing technology best. This is how we take our country back from the fraudsters. Please help NOW!
